

## Light-Curable Materials for Camera Module Assembly

- Excellent adhesion to commonly used substrates in camera module assemblies
- Materials cure in seconds allowing faster processing and higher throughput
- Materials available for a variety of applications including active alignment, barrel fixturing, and FPC reinforcement
- Good resistance to moisture and shock

Dymax light-curable adhesives are ideal for use in the assembly of camera modules used in smart connected devices, automobiles, and industrial camera systems. Our adhesives cure in seconds, providing greater product yields in a much shorter assembly time. They provide excellent adhesion to substrates typically used in the manufacture of camera modules and electronic device housings, and can withstand harsh conditions like the moisture and shock which electronic devices are often exposed to.

### Typical Camera Module Applications

- 1 - Bonding the camera lens
- 2 - Fixturing the camera lens barrel to the lens holder
- 3 - Bonding the IR filter to the lens holder
- 4 - Bonding the lens holder to the PCB
- 5 - Attaching the CCD or CMOS die to the PCB
- 6 - Reinforcing the FPC
