Multi-Pole Lightguide Installation

1. Remove the protective cover from the Spot Lamp’s lightguide holder.

2. Remove the protective end caps from the lightguide. Visually inspect the two ends of the lightguide to verify no foreign material is present. The Dymax liquid filled lightguide ends can be cleaned with isopropyl alcohol as required to remove foreign material and deposition from outgassing.

3. Insert the large end of the lightguide into the holder until it snaps into place.

4. If desired, the lightguide may be fastened into place by tightening the securing set screw installed in the lightguide holder. A hex wrench is provided with the unit for this purpose. The setscrew should be tightened gently to prevent damaging the lightguide.

Note: Multi-leg lightguides should be balanced by rotating the lightguide to obtain the desired UV intensity of each leg before tightening the setscrew.

5. The lightguide is now installed and is ready for use. The end of the lightguide should be periodically cleaned with isopropyl alcohol. Adhesive build-up may be removed from the end of the lightguide by using a razor blade or razor knife.

Please Refer to Component Technical Manuals for Detailed Operating Instructions.
