Safety

Using Safe Operating Pressures

Pressurizing the components in the dispensing system beyond the maximum recommended pressure can result in the rupturing of components and serious personal injury. To minimize the risk of rupturing components and injury, do not exceed the maximum operating pressure of the components in your fluid dispensing system.

Operating Specifications

Recommended compressed air supply pressure to air filter/regulator = 80 to 100 psi (5.5 to 6.9 bar)

Recommended pressure setting at air filter/regulator = 75 psi (5.2 bar)

Maximum pressure setting at air filter/regulator = 100 psi (6.9 bar)

Power required = 110V power receptacle (customer supplied)

Dispensing Tips (All System Configurations)

A variety of both needle and taper dispense tips in various lengths, gauges, and shapes are available from Dymax. Tip selection is critical when precision is required and the length, shape, and size of the tip used will define the shape of the fluid deposit and the performance of your dispense system. For assistance in optimal tip selection, contact the Dymax Application Engineering team.

Visit www.dymax.com/dispensing_tips to see Dymax's dispensing tip selection.
